

STATEMENT OF WORK FORMAT

On-Line Subscription for Congressional News

PR: 4200561811

Background

The Program Analysis Office is responsible for overseeing all budget planning and execution activities related to the Research & Development (R&D) Programs at the GSFC including Exploration, Earth Sciences, Space Sciences, Flight Programs and Projects, and Suborbital and Special Orbital Projects. This Branch works closely with the Deputy Center Director and the Associate Center Director for Technical, providing expert analysis, guidance, and advice on an on-going basis related to programmatic issues and challenges for the GSFC. This analysis is often used to determine when planned objectives are not in alignment with the Center's strategic mission, or when available resources are not able to support the established program goals. Recommendations are made relative to achieving established goals related to the strategic mission of the individual program, and of the Center as a whole. This service will keep the Office up-to-date on Congressional decisions that affect the NASA budget to help us effectively manage Goddard budget requirements.

Scope

- The contractor shall provide 3 licensed users in the Program Analysis Office with unlimited access to their extensive online Insight & Analysis, Legislative Tracking, Budget Tracker, and Special Tools & Features.

Period of Performance

- October 1, 2015 through September 30, 2016
